1 CONCEPTS IN VECTOR SPACES

2 MATRICES

3 SOLUTION TO LINEAR EQUATIONS

4 ORTHOGONALITY

4.1 Product of orthogonal matrices

Show that the product of a set of orthogonal matrices is orthogonal.

$$\mathbf{Q} = \mathbf{Q}_1 \mathbf{Q}_2 \cdots \mathbf{Q}_l^\top$$

where, $\mathbf{Q}_i \in \mathbb{R}^{n \times n}$ and $\mathbf{Q}_i^\top \mathbf{Q}_i = \mathbf{I}$.

Proof: The matrix \mathbf{Q} is orthogonal if and only if $\mathbf{Q}^\top \mathbf{Q} = \mathbf{Q} \mathbf{Q}^\top = \mathbf{I}$. We know that,

$$\begin{aligned} \mathbf{Q}^\top &= (\mathbf{Q}_1 \mathbf{Q}_2 \cdots \mathbf{Q}_l)^\top = \mathbf{Q}_l^\top \mathbf{Q}_{l-1}^\top \cdots \mathbf{Q}_2^\top \mathbf{Q}_1^\top \\ \Rightarrow \mathbf{Q}^\top \mathbf{Q} &= \mathbf{Q}_l^\top \mathbf{Q}_{l-1}^\top \cdots \mathbf{Q}_2^\top \mathbf{Q}_1^\top \mathbf{Q}_1 \mathbf{Q}_2 \cdots \mathbf{Q}_{l-1} \mathbf{Q}_l \end{aligned}$$

Since, $\mathbf{Q}_i^\top \mathbf{Q}_i = \mathbf{I}$, we have,

$$\mathbf{Q}^\top \mathbf{Q} = \mathbf{I}$$

We can similarly show that $\mathbf{Q} \mathbf{Q}^\top = \mathbf{I}$. Thus, the product of a set of orthogonal matrices is orthogonal. ■

4.2 Orthogonal projections of vectors

Let $\mathbf{u} \in \mathbb{R}^n$ be a unit vector. Show that the orthogonal projections on $\mathbf{x} - \mathbf{x}_u = (\mathbf{u} \mathbf{u}^\top) \mathbf{x}$ and $\mathbf{x}_{u^\perp} = (\mathbf{I} - \mathbf{u} \mathbf{u}^\top) \mathbf{x}$ – are orthogonal complements.

Proof: The orthogonal projection matrices $\mathbf{u} \mathbf{u}^\top$ and $\mathbf{I} - \mathbf{u} \mathbf{u}^\top$ project any vector onto the $\text{span}\{\mathbf{u}\}$ and the orthogonal complement of $\text{span}\{\mathbf{u}\}$ respectively.

Its easy that \mathbf{x}_u and \mathbf{x}_{u^\perp} are complementary components of \mathbf{x} ,

$$\mathbf{x} = \mathbf{x}_u + \mathbf{x}_{u^\perp} = (\mathbf{u} \mathbf{u}^\top) \mathbf{x} + (\mathbf{I} - \mathbf{u} \mathbf{u}^\top) \mathbf{x}$$

They are also orthogonal complements because of the following,

$$\begin{aligned} \mathbf{x}_u^\top \mathbf{x}_{u^\perp} &= (\mathbf{u} \mathbf{u}^\top \mathbf{x})^\top ((\mathbf{I} - \mathbf{u} \mathbf{u}^\top) \mathbf{x}) \\ &= \mathbf{x}^\top \mathbf{u} \mathbf{u}^\top (\mathbf{I} - \mathbf{u} \mathbf{u}^\top) \mathbf{x} \\ &= \mathbf{x}^\top \mathbf{u} \mathbf{u}^\top \mathbf{x} - \mathbf{x}^\top \mathbf{u} (\mathbf{u}^\top \mathbf{u}) \mathbf{u}^\top \mathbf{x} \\ &= \mathbf{x}^\top \mathbf{u} \mathbf{u}^\top \mathbf{x} - \mathbf{x}^\top \mathbf{u} \mathbf{u}^\top \mathbf{x} \\ &= 0 \end{aligned}$$

Using the fact that, $\mathbf{u}^\top \mathbf{u} = 1$,

$$\mathbf{x}_u^\top \mathbf{x}_{u^\perp} = \mathbf{x}^\top \mathbf{u} \mathbf{u}^\top \mathbf{x} - \mathbf{x}^\top \mathbf{u} \mathbf{u}^\top \mathbf{x} = 0$$

Thus, \mathbf{x}_u and \mathbf{x}_{u^\perp} are orthogonal to each other. ■

5 MATRIX INVERSES
